Alfa3, s.r.o. is an innovative, towards customers oriented production company which has been dealing with development and production of steel furniture for more than 25 years. Due to the longtime experience and the involvement of our employees we are able to supply not only quality products, but also to ensure a professional consultancy and service.

Our products are characterized by quality processing, a modern design, a massive welded construction and a durable surface treatment. During the construction process of our products we care about using maximally the well-approved unit-principle items and the constructional complexes which make a guarantee of high level reliability also of the new or customized products.

We use only the first class materials and well-approved components bought from prestigious suppliers. The production itself is mostly realized by using high precise CNC machines and computerized production systems of PSBB line. The surface treatment is realized through IDEAL-LINE coating line equipped with GEMA MagicCylinder II coating box with CM30 operation system and 12 automatic electrostatic coating guns.

We are still looking for any occasions to higher the efficiency and productivity of our processes. We use modern environment-friendly technologies. The quality management system is certified by ISO 9001. We are authorized to use the Czech product mark.

The products intended for cloakroom furnishing are important pillars of our product's portfolio and that is why we pay high attention to them. The cloakroom lockers have gone through a generational modification and they newly provide better utility properties and higher safety level. In our assortment you can find six model lines which are graded so that they can meet all spatial, safety and design demands of the widest range of customers.

The producer reserves itself the right to misprints, changes in prices and in technical parameters without previous notice. We are still improving our products, so there can be some differences in details between the product displayed and supplied. All the prices are stated excl. VAT and EXW plant Luže. The prices are valid for minimum order amount which is 10 pieces. If you order less than the minimum amount, an extra charge will be counted.

Cloakroom lockers with inserted doors - technical description

All the important constructional items of the third generation of the cloakroom lockers with doors inserted in a frame construction have been completely reworked. Metal parts are made of steel sheets with higher solidity. The frame construction of the frontal part of the body is newly profiled and provides higher resistance against violent breaking the door into the body and makes a solid support for the safety door bolt. The door construction has been also completely reworked. They are newly furnished with reinforcing elements, they are standardly prepared for installation of opening limiters and damping elements.

• Doors are fitted on massive metal pivots with opening angle approx. 100°, reinforced fitting of the upper pivot.

Extra charge equipment:
 ◦ Metal doors are fitted on massive bar suspensions, opening angle up to 170°

Nameplates and numbering

• Plastic transparent frame for a nameplate of dim. 15 x 60 mm.

Extra charge equipment:
 ◦ Self-adhesive plastic tags in colour of aluminium with engraved digits.
 ◦ Self-adhesive foil digits cut in cutting plotter.

Locking systems

• Cylindrical lock C1, 4000 combinations, a master key option.

• Turning security padlock cap OB1 is intended for a padlock of stirrup diameter 6 - 8 mm.

Locking system consists of a bolt with a safety hook which increases the resistance of the doors against violent breaking.

Extra charge equipment:
 ◦ Coin deposit lock
 ◦ Code mechanical lock
 ◦ Code electronic lock
 ◦ Online electronic systems
 ◦ Chip electronic lock

Ventilation system

The body is furnished with an efficient ventilation system which fulfils with a generous margin demands of DIN 4547 standard. Ventilation slots are cut in a safety section and they are placed in the frontal edge of the upper partition, in locker's bottom, in locker's back wall and on surface of all shelves. To ensure the right function of ventilation please follow the installation instruction of the producer.

• The bottom part of the body is fitted with plastic sliders.

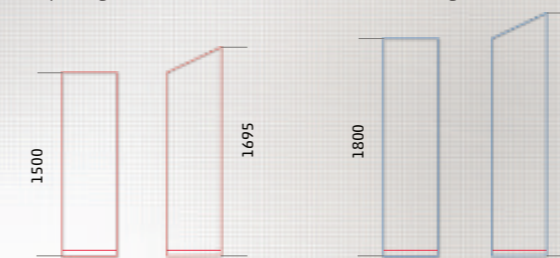

Extra charge equipment:
 ◦ Height-adjustable plastic sliders

Socle 40 mm

The constructional height of the basic body version is 1800 mm. Lowered versions of bodies of 1500 mm are also alternatively available. Lockers can be installed directly on cloakroom's floor, on a brick socle or on a bench. Their bottom part is standardly fitted with plastic sliders.

◦ Versions with integrated sloping tops with elevation of 195 mm and slope angle of 21° are available for an extra charge.

Socle 160 mm

The constructional height of the body on heightened socle is 1920 mm. Lowered versions of bodies of 1620 mm are also alternatively available. Their bottom part is standardly fitted with plastic sliders.

◦ Versions with integrated sloping tops with elevation of 195 mm and slope angle of 21° are available for an extra charge. Cloakroom lockers with sloping tops whose max. height is over 2000 mm are supplied on a mounted heightened socle.

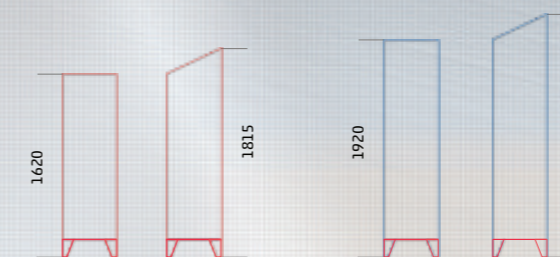

Feet 120 mm

The constructional height of the body on feet is 1920 mm. Lowered versions of bodies of 1620 mm are also alternatively available. Their feet have a reinforced construction and are fitted with plastic endings.

◦ Heightly adjustable feet are available for an extra charge.

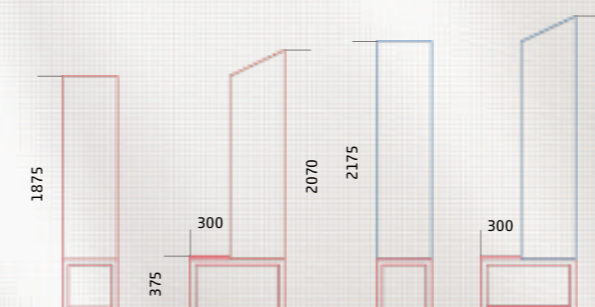

◦ Versions with integrated sloping tops with elevation of 195 mm and slope angle of 21° are available for an extra charge. Cloakroom lockers with sloping tops whose max. height is over 2000 mm are supplied on mounted feet.

Additional cabinets and benches for lockers

The cloakroom lockers can be placed on a heightened socle or on a bench. In our assortment you can find additional cabinets and benches for lockers in basic version, in version with a reclining grate for footwear and in version with lockable drawers for footwear.

◦ For an extra charge the bodies can be furnished with integrated sloping tops with elevation of 195 mm and slope angle of 21°.

Cloakroom lockers of reduced height

Cloakroom lockers of reduced height are intended for using in cloakrooms of primary schools. Alternatively they can be used in combination with additional cabinets or benches.

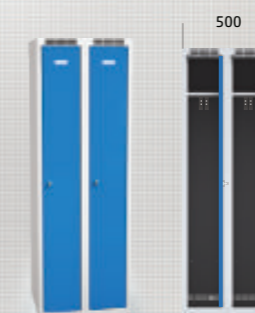

The construction is consisted with basic version of lockers with inserted doors. All the parts are constructed with the regard to maximum safety of all users. The accessible edges are bended. The size of ventilation slots is reduced to prevent eventual injury caused by trapping children's fingers.

High volume cloakroom lockers with inserted doors

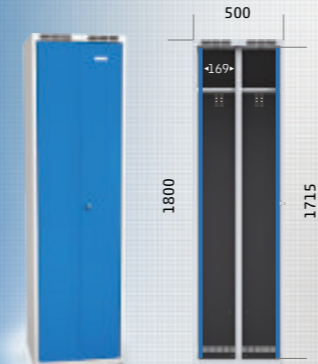

The high volume cloakroom lockers are constructed so that one user has two separate compartments available. Both door wings are lockable with one common lock.

We produce lockers of compartment's width 500, 600, 750 and 800 mm. In our offer there are three basic product lines which differ in doors constructions and in range of standard equipment.

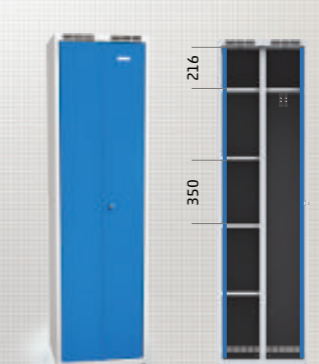

The parts of their body are in frontal parts specially profiled and particular constructional elements are connected together so that a high solidness and superstandard resistance are reached. The body is furnished with a system of natural ventilation. In the upper part inside of each compartment there is placed a deposit shelf. Below the shelf there is fitted a clothes bar with plastic hooks.

Divided cloakroom lockers with inserted doors

The divided cloakroom lockers of low volume have two door wings placed one above another in each compartment. They are suitable for all places where you need as much space as possible for many users on a small place. But you have to take into consideration that the deposit space is only approx. 100 - 160 dm3 according to the chosen width of the locker.

We offer three product lines which differ in door construction and in range of the standard equipment.

- 1 - alsin
The locker is furnished with one-plated doors made of a massive closed profile. Along the whole door circumference there is a safety bending. The doors have a reinforcement of the mounting slot of the lock.
- 2 - aldop
The locker is furnished with double-plated doors with superstandard resistance against bending and twisting. The doors have a reinforcement of the mounting slot of the lock. The opening limiter is supplied standardly.
- 3 - aldera
The locker is furnished with doors made of laminated chipboard with ABS edge.
- 4 - aldur 1
The locker is made of 0,8 mm sheet metal and is furnished with double-plated doors and with a range of other elements reinforcing the resistance of the entire construction. These products are highly recommended for using at schools or at plants with higher demands on resistance and safety.

Cloakroom lockers with inserted Z-shaped doors

The low volume cloakroom lockers have two door wings in each compartment. So for each user there is available one deposit shelf placed along the whole width of the compartment and narrowed space for hanging of clothes furnished with a clothes bar and plastic hooks. We recommend ordering a plastic box for footwear from our original accessories assortment. With our offer you can choose version in Z-shaped doors.

They are suitable for all places where you need as much space as possible for many users on a small place. We offer three product lines which differ in door construction and in range of the standard equipment.

- 1 - alsin
The locker is furnished with one-plated doors made of a massive closed profile. Along the whole door circumference there is a safety bending. The doors have a reinforcement of the mounting slot of the lock.
- 2 - aldop
The locker is furnished with double-plated doors with superstandard resistance against bending and twisting. The doors have a reinforcement of the mounting slot of the lock. The opening limiter is supplied standardly.
- 3 - aldera
The locker is furnished with doors made of laminated chipboard with ABS edge.
- 4 - aldur 1
The locker is made of 0,8 mm sheet metal and is furnished with double-plated doors and with a range of other elements reinforcing the resistance of the entire construction. These products are highly recommended for using at schools or at plants with higher demands on resistance and safety.

Lockers with lockable boxes

The lockers with lockable boxes are designed for safe storing of items of low volume. They are characterized by a durable construction, a modern look and quality processing. The standard locking system is a cylindrical lock or a turning security padlock cap.

For an extra charge you can order coin deposit locks, code mechanical locks or electronic locks.

We offer three product lines which differ in door construction and in range of the standard equipment.

Lockers with glass-filled doors

The lockers with glass-filled doors are designed for storing of luggage at stores, schools and industry plants. Their bodies are constructed as massive weldments with an integrated socle of 160 mm. The doors are made of safety hardened glass and they are fitted on bodies by massive metal hinges. The standard locking system is a cylindrical lock or a coin deposit lock.

Additional cabinets for cloakroom lockers, sloping tops

The additional cabinets for cloakroom lockers provide a simple way how to increase the deposit space of every single lockers user without any demand on larger ground area of the cloakroom. If you plan to use the additional cabinets for footwear storing, we recommend you placing a plastic box inside the cabinet. It will protect it against eventual water or dirt releasing from footwear into the bottom part of the cloakroom locker. Cloakroom lockers are from the standard versions equipped with mounting slots for additional cabinets connecting. If you order the cloakroom lockers together with the additional cabinets, take occasion to order the pair locks installation which allows you locking doors of the locker and of the cabinet by only one key.

All product's depth 500 mm

Compact cloakroom units

The compact cloakroom units are suitable especially for cloakrooms at stores, hospitals and office buildings. The big advantage of the unit is that every employee has its own box for valuable personal things.

The space for storing clothes and footwear is open and can be used by all users. The compact cloakroom units can be made of all lockers with lockable boxes. But it is necessary to make an extra charge adjustment KY on them.

Part and parcel of this adjustment is a double-sided slots set up needed for connection of the central parts of the unit. The central parts of the units consist of two deposit shelves, a clothes bar and a footwear grate. Order codes are KY 55 H or KY 90 H.

Instead of the deposit shelves it is possible to order version with four lockable boxes placed side-by-side. Order code KY 30 4 1 5TR.

Lockers for work clothes distribution

Module 400

All product's depth 500 mm

The lockers for work clothes distribution constructionally come out from ALSIN cloakroom lockers line. These lockers find their place at plants in which it is an external service organisation which takes care for work clothes.

The lockers for releasing the new work clothes are furnished with lockable boxes, so each box has its own user. The doors are set in a central lockable frame. So an employee of the service organisation has an easy access to all boxes and it also makes the process of supplying of work clothes and equipment much faster.

The lockers for collecting used work clothes are in the upper part furnished with a throw-in flap. Their bottom part is furnished with lockable doors accessible to an employee of the service organisation. Inside the locker there is a bag holder.

Surface treatment

Additional cabinets and benches for lockers

Versions of construction of additional cabinets and benches for lockers:
The construction of the frame is welded from steel profiles 30 x 30 mm.
The feet of benches are standardly furnished with plastic sliders.
For an extra charge it is possible to supply frames with an option of height modification under the order code VN.
The surface treatment of the frame is made by powder coat in RAL 7035.

Order code VN.
Price (EUR) 8,1,-

At the end of each line of benches with drawers for footwear we recommend installing a covering sheet PL ZB 80.

Versions of construction of additional cabinets and benches for lockers:

1- Basic version

2 - Version with a reclining grate for footwear

The grate can be removed so you can easily clean the space under the locker.

3 - Version with drawers for footwear

The drawers are guided in 100% telescopic slide rails with carrying capacity 40 kg.
If you wish we can supply a pair lock so you will be able to lock both the drawer and the locker with one key. For visible sides we recommend using side covering sheet PL ZB 80 for benches or PL ZB 50 for additional cabinets.

Version of sitting desks of benches for lockers:

1 - Grey desk made of laminated chipboard with ABS edge

2 - Spruce varnished sticks A/B

3 - Beech varnished sticks A/B

4 - PVC reinforced sticks with blind flanges at the end of profiles

1 - Laminated desk

4 - PVC sticks

2 - Spruce sticks

3 - Beech sticks

Double-sided bench with backrest and racks

The construction of the frame is welded from steel profiles. Their feet have a rectangle section 60 x 30 mm and they are fitted with plastic sliders. The clothes racks moulding is fitted with safety clothes hooks and nameplate holders. Under the moulding there is a backrest and a perforated panel which protects clothes from touching the wall.

For an extra charge we can supply frames of additional cabinets and benches with height modification.

Order code of the height modification is **VNO**.

Price (EUR) 12,1,-

Versions of bench constructions:

- 1 - Basic version
- 2 - Version with a reclining grate for footwear. The grate can be removed so you can easily clean the space under the bench.

Versions of sitting surfaces of benches:

- 1 - Grey desk made of laminated chipboard with ABS edge
- 2 - Spruce varnished sticks A/B
- 3 - Beech varnished sticks A/B
- 4 - PVC reinforced sticks with blind flanges on profile ends

1 - Laminated desk

ALFORT lockers with front-standing doors - technical description

On the following pages we introduce you a modified line of cloakroom lockers with front-standing doors with a trade name ALFORT. These cloakroom lockers are characterized by modern and clear lines and a wide range of material and colour versions of doors panels. Due to all these characteristics the lockers can be used in modern interior architecture, especially at cloakrooms of hotels, wellness and fitness centres or swimming pools.

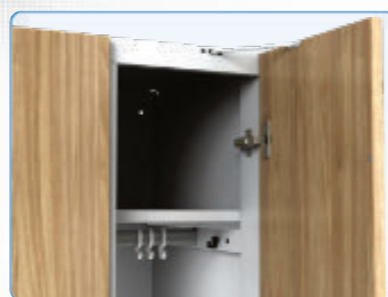

- Doors hinged on furniture pivots with damped closing function

Extra charge equipment:

- Doors hinged on stainless pivots with damped closing function

- Oval clothes bar made of eloxal aluminium and movable plastic hooks in each compartment
- Square aluminium hold for comfortable manipulation

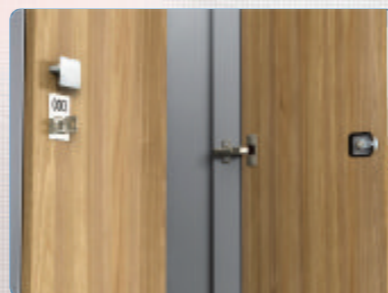

Extra charge equipment:

- Self-adhesive plastic tags in colour of aluminium with engraved digits.

Locking systems

- Cylindrical lock C1, 4000 combinations, a master key option.
- Turning security padlock cap OB1 is intended for a padlock of stirrup diameter 5 - 8 mm.

Locking systems C1 and OB1 consist of a bolt with a safety hook which increases the resistance of the doors against violent breaking.

Extra charge equipment:

- Coin deposit lock
- Code mechanical lock
- Code electronic lock
- Online electronic systems
- Chip electronic lock

Ventilation system

• The body is furnished with an efficient ventilation system which fulfil with a generous margin demands of DIN 4547 standard. Ventilation slots are cut in a safety section and they are placed into the horizontal body panels and on locker's back wall. To ensure the right function of ventilation please follow the installation instruction of the producer.

Extra charge equipment:

- **Version for moisty environments**
For an extra charge we can supply lockers in version for moisty environments. For the metal parts of the locker is used steel, zinc galvanized plate which is then coated by an exterior colour.

- The bottom part of the body is fitted with plastic sliders.

Extra charge equipment:

- Heightly adjustable plastic sliders.

Metal doors

Doors wings are made of steel plates and are standardly supplied in durable double-plated version. Doors are hinged on furniture pivots with damped closing function. Massive opening limiter is supplied standardly. Doors are fitted with an aluminium hold for better manipulation.

The surface treatment is made by resistant powder coat.

Metal doors DECORAL

Doors wings are made of steel plates and are standardly supplied in durable double-plated version. Doors are hinged on furniture pivots with damped closing function. Massive opening limiter is supplied standardly. Doors are fitted with an aluminium hold for better manipulation.

The surface treatment is made by special technology DECORAL which enables applying wooden or stony surfaces, carbon surfaces and many other patterns. For an actual offer of patterns please contact your dealer.

Metal doors UV print

Doors wings are made of steel plates and are standardly supplied in durable double-plated version. Doors are hinged on furniture pivots with damped closing function. Massive opening limiter is supplied standardly. Doors are fitted with an aluminium hold for better manipulation.

The surface treatment is made by durable powder coat which makes a base coat. On the door wing is then applied desired graphics by UV printing technology.

Laminated doors

Doors wings are made of laminated chipboard desk with ABS edge. Doors are hinged on furniture pivots with damped closing function. Massive opening limiter is supplied standardly. Doors are fitted with an aluminium hold for better manipulation.

HPL doors

Doors wings are made of a sandwich desk with HPL surface. Doors are hinged on furniture pivots with damped closing function. Massive opening limiter is supplied standardly. Doors are fitted with an aluminium hold for better manipulation.

Cloakroom lockers with front-standing doors

The cloakroom lockers of Alfort line are intended for using at representative rooms of spas, hotels, swimming pools, wellness and fitness centres. Ingenious space arrangement provides to their users deposit space of volume of 245-330 l.

For moisty environments you can order an extra charge version made of zinc galvanized plates coated by exterior powder coat. In this version, the door pivots with damped closing are made of stainless steel. We recommend ordering doors made of a sandwich desk with HPL surface.

Surface treatment

The input material is steel plate or steel profiles. In painting line IDEAL-LINE there is applied a Fe-phosphate layer and the segments are dried. It ensures a better adhesion of the powder coat to the base coat. The powder coat of the desired shade is then applied onto the segments in electrostatic field and then it is hardened at temperature of approx. 180 °C. The final coat is hygienic, flexible and scratch resistant.

The input material is steel zinc galvanized plates or steel profiles with zinc base. In painting line IDEAL-LINE there is applied a Fe-phosphate layer and the segments are dried. It ensures a better adhesion of the powder coat to the base coat. The powder coat of the desired shade is then applied onto the segments in electrostatic field and then it is hardened at temperature of approx. 180 °C. The final coat is hygienic, flexible and scratch resistant. The price for this surface treatment is calculated individually according to the chosen products and actual material prices.

Sandwich doors with HPL surface

The price of ALFORT line lockers with sandwich doors furnished with HPL (high-pressure laminate) surface panels is calculated individually according to the amount of ordered lockers and chosen colour.

This modern material is highly moisture and wear resistant. We recommend using it with combination with body and door's frame from zinc galvanized plates. This version is suitable especially for cloakrooms at swimming pools and hotels. The actual offer of available colours and surfaces is on demand.

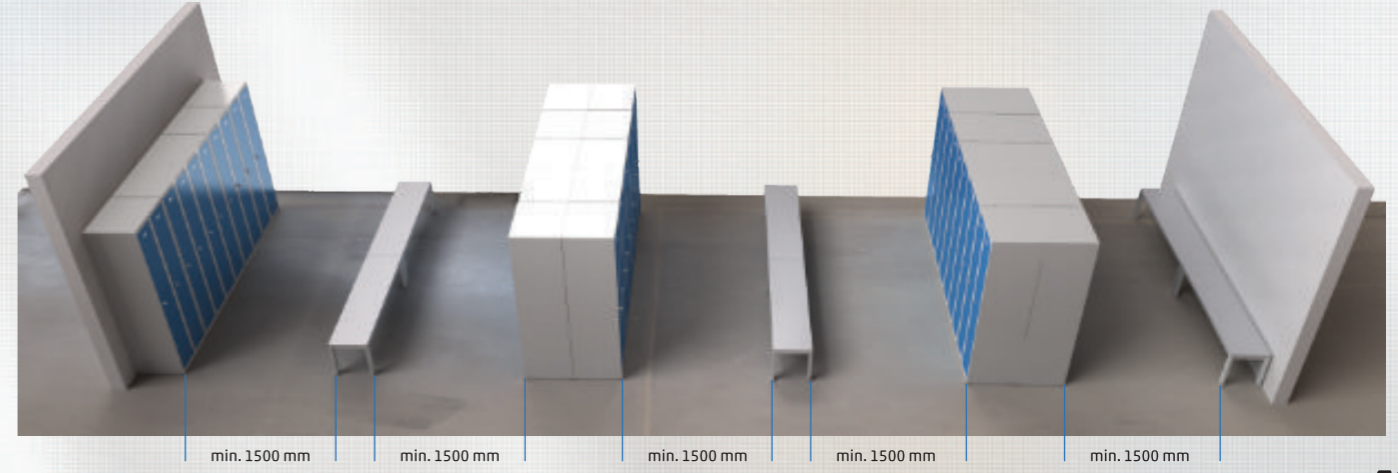

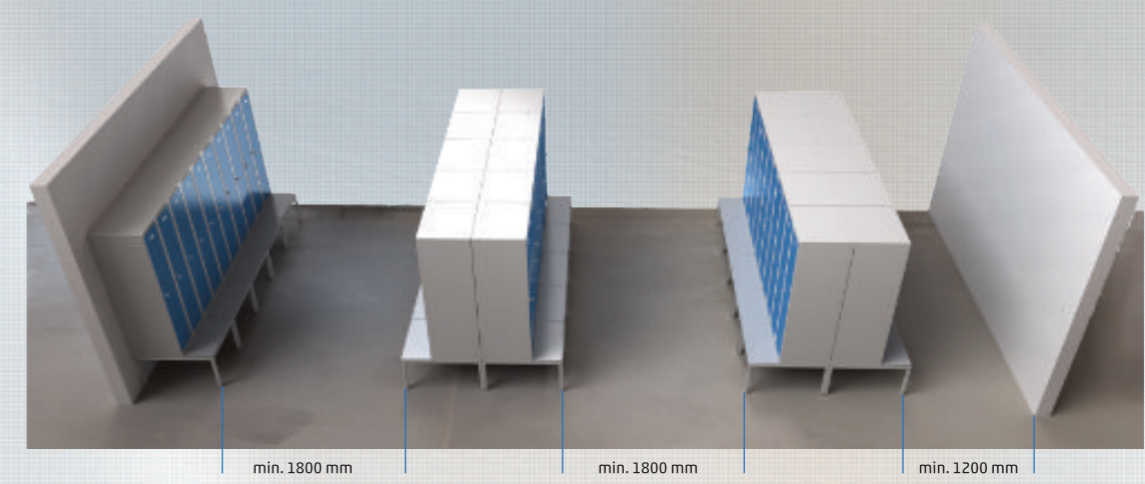

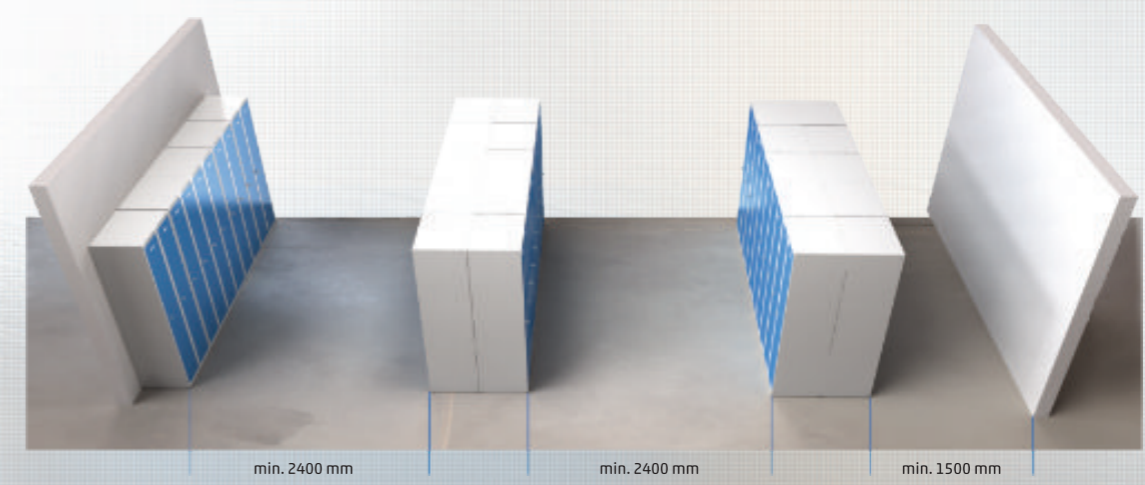

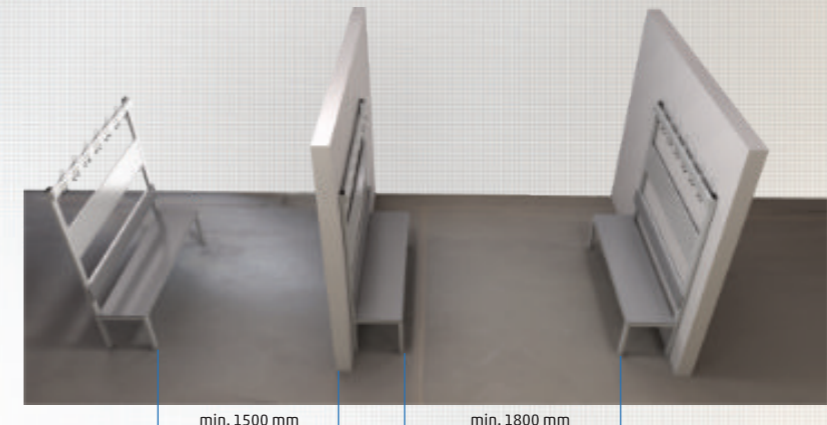

Doors made of safety glass

The price of the ALFORT cloakroom lockers with doors made of safety glass is calculated individually.

Recommended arrangement of lockers and benches according to ČSN 734108

Cloakrooms at plant with more than 5 employees have to be separated according to gender. The number of places has to correspond to the total amount of users with 10% margin. At workplaces with shifts operation one place cannot be used by two users even if they work in different shifts. One person should have at least 0,5 m2 of cloakroom's surface.
